Re: BARREL FITMENT

The SSK-50 is produced to the nominal geometry specifications of the last iteration of the Thompson Center Contender© with extreme precision and low variation.

A new benchmark for frame consistency has been established.

56 years of Contender© barrel production from at least 8 manufacturers has led to an evolution in barrel geometry and variation that cannot be compensated for in a fixed design.

Although customers report very high percentages of frame/barrel fit success with the SSK-50, there may be some barrels that are so far out of Thompson Center's specifications that they may not function with the SSK-50.

Respectfully,

TEAM SSK
